State of Oklahoma  
Public Water Supply Program  
Annual Compliance Report**

Water Quality Division  
Oklahoma Department of Environmental Quality  
June 30th, 2010

**State of Oklahoma**  
Public Water Supply Program  
Annual Compliance Report  
for Calendar Year 2009

**The Drinking Water Program: An Overview**

The EPA established the Public Water System Supervision (PWSS) Program under the authority of the 1974 Safe Drinking Water Act (SDWA). Under the SDWA and the 1986 Amendments, EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs). For some regulations, EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of contaminants in water. The Agency also regulates how often public water systems (PWSs) monitor their water for contaminants and report the monitoring results to the states or EPA. Generally, the larger the population served by a water system, the more frequent the monitoring and reporting (M/R) requirements. In addition, EPA requires PWSs to monitor for unregulated contaminants to provide data for future regulatory development. Finally, EPA requires PWSs to notify their consumers when they have violated these regulations. The 1996 Amendments to the SDWA require consumer notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of alternative water supplies during the violation.

The SDWA applies to the 50 states, the District of Columbia, Indian Lands, Puerto Rico, the Virgin Islands, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the Republic of Palau.

The SDWA allows states and territories to seek EPA approval to administer their own PWSS Programs. The authority to run a PWSS Program is called primacy. For a state to receive primacy, EPA must determine that the state meets certain requirements laid out in the SDWA and the regulations, including the adoption of drinking water regulations that are at least as stringent as the Federal regulations and a demonstration that they can enforce the program requirements. Of the 56 states and territories, all but Wyoming and the District of Columbia have primacy. The EPA Regional Offices administer the PWSS Programs within these two jurisdictions. The Oklahoma Department of Environmental Quality (DEQ) is the primacy agency for the State of Oklahoma Drinking Water Program.

The 1986 SDWA Amendments gave Indian Tribes the right to apply for and receive primacy. EPA currently administers PWSS Programs on all Indian lands except the Navaho nation, which was granted primacy in late 2000.

**Annual State PWS Report**

Each quarter, primacy states submit data to the EPA Safe Drinking Water Information System (SDWIS/FED), an automated database maintained by EPA. The data submitted include, but are not limited to, PWS inventory information, the incidence of Maximum Contaminant Level, Maximum Residual Disinfectant Level, monitoring, and treatment technique violations; and information on enforcement activity related to these violations. Section 1414(c) (3) of the Safe Drinking Water Act requires states to provide EPA with an annual report of the violations in each of six categories: MCLs, MRDLs, treatment techniques, variances and exemptions, significant monitoring violations, and significant consumer notification violations. Violation and enforcement action data are stored in the SDWIS/FED database. The tables in this report are based largely on data retrieved from DEQ databases.

## **Public Water System**

A Public Water System is defined as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. There are three types of PWSs. PWSs can be community (such as towns), non-transient non-community (such as schools or factories), or transient non-community systems (such as rest stops or parks). For this report, the acronym “PWS” means systems of all types unless specified in greater detail.

### **Maximum Contaminant Level**

Under the Safe Drinking Water Act (SDWA), the EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).

### **Maximum Residual Disinfectant Levels**

The EPA sets national limits on residual disinfectant levels in drinking water to reduce the risk of exposure to disinfectant byproducts formed, when PWSs add chemical disinfectant for either primary or residual treatment. These are known as Maximum Residual Disinfectant Levels (MRDLs).

### **Treatment Techniques**

For some regulations, the EPA establishes treatment techniques (TTs) in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, some bacteria, turbidity, and turbidity.

### **Variances and Exemptions**

A primacy state can grant a PWS a variance from a primary drinking water regulation if the characteristics of the raw water sources reasonably available to the PWS do not allow the system to meet the MCL. To obtain a variance, the system must agree to install the best available technology, treatment techniques, or other means of limiting drinking water contamination that the Administrator finds are available (taking costs into account), and the state must find that the variance will not result in an unreasonable risk to public health. At the time the variance is granted, the state must prescribe a schedule (including increments of progress) the PWS will follow to come into eventual compliance with the MCL. Small systems (those serving 3,300 or fewer persons; or 10,000 or fewer persons with the Administrator’s approval) may also be granted variances if they cannot afford (as determined by application of the Administrator’s affordability criteria) to comply with certain MCLs (non-microbial, promulgated after January 1, 1986) by means of treatment, alternative source of water, or restructuring or consolidation. Small systems will be allowed three (3) years to install and operate EPA approved small system variance technology. The variance shall be reviewed not less than every five (5) years to determine if the system remains eligible for the variance.

A primacy state can grant an exemption temporarily relieving a PWS of its obligation to comply with an MCL, treatment technique, or both if the system’s noncompliance results from compelling factors (which may include economic factors) and the system was in operation on the effective date of the MCL or treatment technique requirement. A new PWS that was not in operation on the effective date of the MCL or treatment technique requirement by that date may be granted an exemption only if no reasonable alternative source of drinking water is available to the new system. Neither an old or a new PWS is eligible for an exemption if management or

restructuring changes can reasonably be made that will result in compliance with the SDWA or improvement of water quality, or if the exemption will result in an unreasonable risk to public health. The state will require the PWS to comply with the MCL or treatment technique as expeditiously as practicable, but not later than 3 years after the otherwise applicable compliance date.

### **Monitoring**

A PWS is required to monitor and verify that the levels of contaminants present in the water do not exceed the MCL. If a PWS fails to have its water tested as required or fails to report test results correctly to the primacy agent, a monitoring violation occurs.

### **Significant Monitoring Violations**

For this report, significant monitoring violations are generally defined as any major monitoring violation that occurred during the calendar year of the report. A major monitoring violation, with rare exceptions, occurs when no samples were taken or no results were reported during a compliance period.

### **Consumer Notification**

Every Community Water System is required to deliver to its customers a brief annual water quality report. This report is to include some educational material, and will provide information on the source water, the levels of any detected contaminants, and compliance with drinking water regulations.

### **Significant Consumer Notification Violations**

For this report, a significant public notification violation occurred if a community water system completely failed to provide its customers the required annual water quality report.

### **Public Water Supply Inventory – Calendar Year 2009**

The SDWA defines a Public Water Supply system (PWS) as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. There are three types of PWSs. PWSs can be community (such as towns and rural water districts), non-transient non-community (such as schools or factories), or transient non-community systems (such as rest stops or parks). For this report, the acronym “PWS” means systems of all types unless specified in greater detail.

The Oklahoma Department of Environmental Quality also recognizes smaller systems as public water supplies. These public water supplies are referred to as minor or non-public water systems. Violations and enforcement actions for minor public water supply systems are not reported to SDWIS and are not included in this report.

The number of Community, Non-Transient Non-Community, and Non-Community water systems and the population served by each is given in the following table. The average number of individuals that consume water from each system each day is used to calculate the number of residents served by a public water supply. Because some systems are restaurants, tourist attractions, etc., individuals may be counted more than once due to where they patronize or work. Out-of-state individuals that visit or do business in the state are also counted.

| <b>Table A: Public Water Supply Systems by Type</b> | <b>Number of Systems</b> | <b>Population</b> |
|---|--------------------------|-------------------|
| Community Systems (C)                               | 1,088                    | 3,548,420         |
| Non-Transient Non-Community Systems (NTNC)          | 106                      | 21,608            |
| Non-Community Systems (NC)                          | 374                      | 30,987            |
| <b>Total PWS systems meeting Federal Definition</b> | <b>1,568</b>             | <b>3,601,015</b>  |

Public water supply systems may receive their water from groundwater wells, surface water impoundments or reservoirs, or purchase water from other systems for their primary source of drinking water or for supplemental supply. The number of groundwater, surface water, and purchase systems and the population served by each type is given in the table below. Eighty-one percent (81%) of the population is served by surface water or purchased from surface water systems.

| <b>Table B: Public Water Supply Systems by Source</b>  | <b>Number of Systems</b> | <b>Population</b> |
|--|--------------------------|-------------------|
| Public Water Supplies using Surface Water as their Primary Source                                    | 198                      | 2,349,474         |
| Public Water Supplies using Groundwater as their Primary Source                                      | 717                      | 614,957           |
| Public Water Supplies using Groundwater under the Influence of Surface Water as their Primary Source | 8                        | 41,014            |
| Public Water Supplies purchasing from Surface Water systems  | 518                      | 549,535           |
| Public Water Supplies purchasing from Groundwater systems  | 118                      | 42,293            |
| Public Water Supplies purchasing from Groundwater under the Influence of Surface Water systems       | 9                        | 3,742             |
| <b>Total PWS systems</b>   | <b>1,568</b>             | <b>3,601,015</b>  |

There are two thousand five hundred and twelve (2,512) water wells currently being operated by PWSs in the state of Oklahoma. The number of wells operated by community, non-transient non-community, and non-community water systems are given in the table below.

| <b>Table C: Number of Wells operated by Public Water Supply Systems</b> |              |
|---|--------------|
| Community system wells  | 2,039        |
| Non-Transient Non-Community Systems (NTNC) wells                        | 158          |
| Non-Community Systems (NC) wells  | 315          |
| <b>Total Number of PWS wells</b>  | <b>2,512</b> |

### Public Water Supply Violations and Enforcement – Calendar year 2009

The number of MCL/MRDL violations, action level exceedances, treatment technique violations, and monitoring violations for each contaminant regulated for the compliance interval January 1, 2009, to December 31, 2009 is given in the following table:

| Violations  | SDWIS Codes | MCLs                 |                                   | Treatment Technique  |                                   | Significant Monitoring/Reporting |                                   |
|---|-------------|----------------------|-----------------------------------|----------------------|-----------------------------------|----------------------------------|-----------------------------------|
|   |             | Number of Violations | Number of Systems with Violations | Number of Violations | Number of Systems with Violations | Number of Violations             | Number of Systems with Violations |
| <b>Chemical Contaminant</b>                                   |             |                      |                                   |                      |                                   |                                  |                                   |
| Arsenic MCL Violation   | 01/02       | 36                   | 9                                 |                      |                                   |                                  |                                   |
| Arsenic Monitoring Violation                                  | 03/04       |                      |                                   |                      |                                   | 2                                | 2                                 |
| IOC MCL Violation   | 01/02       | 3                    | 3                                 |                      |                                   |                                  |                                   |
| IOC Monitoring / Reporting                                    | 03/04       |                      |                                   |                      |                                   | 0                                | 0                                 |
| Nitrate & Nitrite as (N)MCL Single                            | 01/02       | 94                   | 27                                |                      |                                   |                                  |                                   |

### **Comments and Remarks**

The State of Oklahoma's Public Water Supply Program currently oversees one thousand five hundred and sixty-eight (1,568) public water supplies ("PWS") that meet the federal definition of a PWS. Of these one thousand five hundred and sixty-eight (1,568) systems, one thousand three hundred and thirty-three (1,333) or eighty-five percent (85%) of these systems reported no maximum contaminant level (MCL) violations.

Nine (9) systems had thirty-six (36) violations for exceeding the MCL for arsenic. Two (2) systems had two (2) violations for arsenic monitoring. Three (3) systems had three (3) violations for exceeding the MCL of the inorganic chemical contaminant (IOC) group. There were no violations for IOC group monitoring. Twenty-seven (27) systems had ninety-four (94) violations for exceeding the nitrate MCL standard in at least one of their wells during the calendar year of 2009. Thirty-four (34) systems had forty-seven (47) nitrate monitoring violations. There were zero (0) systems with synthetic organic contaminant (SOC) group MCL violations. There were zero (0) SOC monitoring contaminant group violations. Two (2) systems had six (6) volatile organic chemical contaminant (VOC) group MCL violations. Thirty-eight (38) systems had one thousand two hundred and sixty-one (1,261) VOC contaminant group monitoring violations.

Nine (9) systems had nine (9) Radionuclide MCL violations in the calendar year 2009. Some MCL and monitoring violations for Radionuclide Rule had not been determined in past annual compliance reports. The following data includes calendar years 2004-2009. Eight (8) systems had nine (9) violations reported for exceeding the MCL for Gross Alpha Particle Activity, Excluding Radon and Uranium from 2004 - 2009. Seven (7) systems had (15) violations reported for exceeding the MCL for Combined Radium from 2004 - 2009. One (1) system had one (1) violation reported for exceeding the MCL for Gross Beta Particle Activity from 2004 - 2009. Fifteen (15) systems had forty-nine (49) violations reported for exceeding the MCL for Uranium from 2004 - 2009. Forty (40) systems had fifty-five (55) violations for Radionuclides monitoring reported from 2004 - 2007. Fourteen (14) systems had nineteen (19) violations for Radionuclides monitoring reported for 2009.

There were four hundred and twenty-four (424) violations of the Stage 1 Disinfectants and Disinfection Byproducts Rule (Stage 1 DBPR) MCL by one hundred and five (105) systems. Forty-four (44) systems had one hundred and thirty-nine (139) violations of the Stage 1 DBPR Treatment Technique requirement. Forty-five (45) systems had one hundred and four (104) monitoring violations for the Stage 1 DBPR.

Eleven (11) systems had eleven (11) Total Coliform Rule ("TCR") Acute MCL violations, meaning eleven (11) mandatory Boil Orders were issued for these PWSs that tested positive for fecal coliform or E-coli. Sixty-nine (69) PWSs had seventy-nine (79) TCR MCL violations that indicated a coliform positive sample. Three hundred and sixty-seven (367) systems had six hundred and eighty-six (686) routine monitoring violations for TCR. Sixty-two (62) systems had seventy-eight (78) repeat monitoring violations for TCR.

All surface water PWSs in Oklahoma are required to provide filtration. One (1) of the one hundred and ninety-eight (198) surface water systems violated the Surface Water Treatment Rule (SWTR) for treatment technique. None of the systems were in violation for SWTR monitoring and reporting. None of the systems had Filter Backwash Recycle Rule violations for treatment technique or monitoring and recordkeeping. There were seventy-seven (77) turbidity treatment technique violations by twenty-six (26) systems for Interim Enhanced Surface Water Treatment Rule ("IESWTR"). There were fifty-one (51) monitoring and reporting violations by eleven (11) systems for IESWTR. None of the systems had treatment technique violations for the Lead and Copper Rule. One hundred and thirty-four (134) systems had one hundred and thirty-four (134) monitoring violations for the Lead and Copper Rule.

The number and types of enforcement actions issued in 2009 are given in the table below:

| <u>Type of Enforcement Actions</u>                | <u>Number of Enforcement Actions</u> |
|---|--------------------------------------|
| Informal Enforcement Letters issued               | 1752                                 |
| Notices of Violation/Consent Orders issued        | 417                                  |
| Administrative Compliance Orders issued           | 3                                    |
| Boil Advisories issued                            | 13                                   |
| <b>Total Number of Enforcement Actions Issued</b> | <b>2185</b>                          |
| <b>Return to Compliance Issued</b>                | <b>433</b>                           |

The Oklahoma Department of Environmental Quality issued two thousand one hundred and eighty-five (2,185) enforcement actions in response to the violations listed in this report. These enforcement actions consisted of one thousand seven hundred and fifty-two (1,752) informal enforcement letters. Four hundred and seventeen (417) Notices of Violation (“NOVs”)/Consent Orders (“COs”), three (3) Administrative Compliance Order (“ACOs”), and thirteen (13) Boil Advisories we administered. Four hundred and thirty-three (433) systems were returned to compliance during the calendar year of 2009.

An informal enforcement document is the first document issued to facilities when they fail to monitor. A Notice of Violation is the first formal enforcement document issued to facilities when they exceed maximum allowable levels or fail to meet Department of Environmental Quality rules and regulations concerning matters such as construction deficiencies or operating procedures. A Consent Order is typically the next order issued. The Consent Order is an order that contains an agreement between the water system and the DEQ, and details the tasks and deadlines for correcting the cited violation. An Administrative Consent Order is an order that is issued when time is limited, and there is a significant health hazard, or the water system refuses to agree to the Consent Order. In an Administrative Consent Order, the DEQ tells the water system what tasks need to be completed and sets deadlines for the completion of these tasks. Both the Consent Order and the Administrative Consent Order have stipulated penalties for failing to meet the required deadlines. Boil Advisories are usually issued to systems that have “acute” or “fecal positive” bacteriological violations. Boil Advisories require immediate notice to all consumers in order inform the public of how to make their water safe for human consumption.
